Re: Syngenta Dicamba position

Dear Valued Customer:

As you may be aware a lawsuit was filed in the 9th circuit court against the EPA as a result of the re-approval of conditional registration of Dicamba OTT (Over the Top) usage in 2018. When the EPA granted the re-approval of the conditional registration for Dicamba over the top of dicamba tolerant soybeans and cotton crops, Tavium[®] Plus VaporGrip[®] Technology herbicide was not yet registered. Tavium received EPA registration on April 5th, 2019. As such, this order doesn't mention Tavium and thus we will continue to take orders for Tavium.

Tavium is the only pre-mix on market and contains S-MOC (Group 15) and Dicamba (Group 4) delivering both residual and contact control of tough to manage Glyphosate resistant weeds.

Syngenta wants to reiterate the unique labeled application timing for Tavium;

- Preplant through the V4 growth stage of soybeans or within 45 days after planting, whichever comes first.
- Preplant through the 6-leaf growth stage of cotton or within 60 days after planting, whichever comes first.
- Key State cutoff dates include;
 - Arkansas: May 25th (Date already passed)
 - Illinois, Minnesota, and Indiana: June 20th
 - North Dakota and South Dakota: June 30th

Syngenta is fortunate to have a robust herbicide portfolio that offers post emergent offerings including; Sequence[®], Flexstar[®], Flexstar[®] GT 3.5, Prefix[®], Reflex[®], and Dual Magnum[®]. Syngenta has taken an aggressive supply position on the products listed above. In order to be able to proactively meet demands we ask that you work with your sales and customer service representative on orders you may have for this growing season.

We will continue to monitor this ruling and evaluate any further implications that may impact our product offerings and/or programs.

Thank you for your continued support of the Syngenta portfolio.

Sincerely,

Jeff Cecil
Head, Crop Protection Marketing
